

## Wandsworth Pontoon Moorings

**Client:** Wandsworth Riverside Quarter  
**Location:** London  
**Size:** £600,000  
**Working With:** Houlder  
**Start Date:** 2004

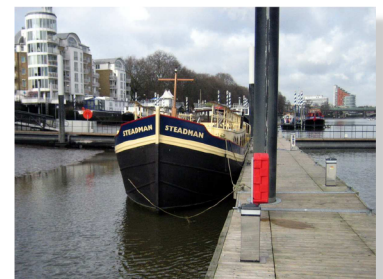

Pontoon moorings for residential and visiting boats have been constructed in Wandsworth adjacent to the new Riverside Quarter development. The new moorings provide 470 metres of berthing face for residential boats, and 60 metres for visitors. The pontoons are connected to the shore by a gangway which gives easy access gradients.

Beckett Rankine managed this project from inception, including the designs and construction supervision. The berths were designed as heavy duty pontoons secured by piles. Consents and approvals had to be sought from several different departments and agencies for their location.

- Marine piling.
- Small craft pontoons.
- Disabled access.
- River works.

The residential berths are arranged on two rows of pontoons lying parallel to the riverbank. The inner pontoon dries out at low tide, while the outer pontoon only dries out on exceptionally low tides. Vessel movements are only occasionally required but access is nearly always available.
